

FENCO'S FLEXIBLE GERM SHIELD CONNECTORS

FENCO'S unique solution offers you the flexibility to quickly form a customized germ barrier solution for teller lines, office desks, CSR desks, work areas, transaction areas, conference room tables and more.

Fenco's translucent and flexible fastening hinge is designed to easily link any size or number of Fenco Germ Shields together in a matter of seconds. You can easily form multiple sizes, shapes and configurations to maximize protection in the workplace. Additional benefits listed below.

SAVE SHIPPING \$ AND REDUCE FREIGHT DAMAGES: Instead of shipping a 35"W or 48"W shield, you can ship two 17"W or two 24"W shields with one Fenco Connector to form a 35"W or 48"W solution. The smaller the shipment, the lower the shipping costs and less possibility of damages occurring.

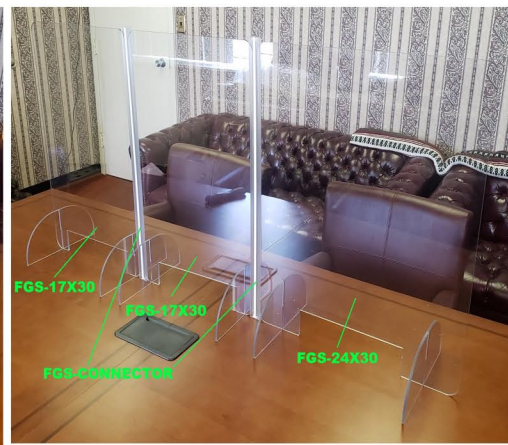

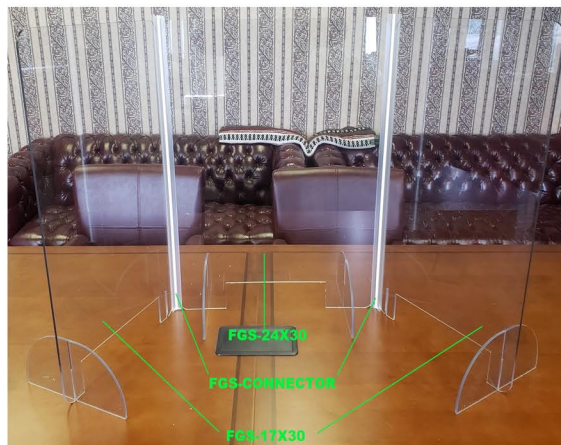

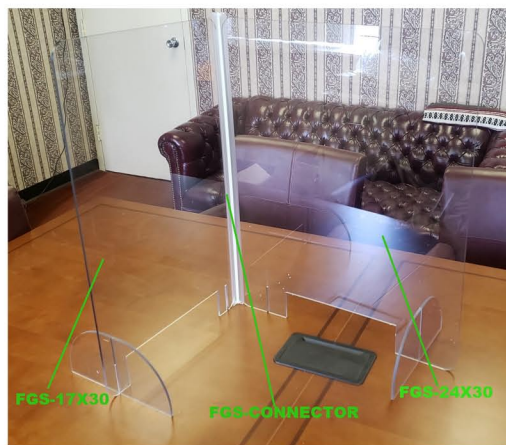

INCREASED STABILITY: When linking shields together using Fenco's Connectors, the stability of the linked shields is more of that than a single shield spanning the same distance.

SAFER TO SET-UP: It's easier and safer to install smaller shields instead of larger shields.

FLEXIBILITY TO ADD & REMOVE SECTIONS AS NEEDED: Fenco's Shield Connectors give you the option of removing or adding barrier sections for real time adjustments based on the ever-changing health climate and workplace requirements.

SAVE ON REPLACEMENTS: Should your shield become damaged or worn, Fenco's solution allows you to replace just the damaged or worn section, not the entire barrier.

FULLY FLEXIBLE CONNECTORS: Fenco's shield connectors are flexible 180 degrees allowing you to form a shaped barrier solution for curved and angled desks & counter tops.
