FENCO'S FLEXIBLE GERM SHIELD CONNECTORS

Fenco's unique solution offers you the flexibility to quickly form a customized germ barrier solution for your office desks, CSR desks, conference room tables and transaction areas.

Fenco's translucent & flexible fastening hinge is designed to link any size and any number of Fenco Germ Shields together in a matter of seconds. Easily form multiple widths and configurations to maximize protection in the workplace. Additional benefits listed below:

LOWER SHIPPING COST & REDUCE FREIGHT DAMAGE – instead of shipping a 35"W shield to fill a 35"W space, ship two small 17"W shields to reduce your shipment size and cost.

MORE STABILITY & SAFER SET-UP – When Fenco's shields are linked together, they exceed the stability of a single shield of the same overall width (less chance of tipping onto someone). It is also safer to set-up small sections VS one large section.

REDUCE BARRIER SIZE & MODIFY CONFIGURATION OVER TIME – The ability to remove sections over time to slowly open your workspace back up as the health climate/culture becomes more relaxed.

REDUCE THE COST OF REPLACEMENTS – should your shield become damaged by accident, it's easier and less costly to replace one 17"W section vs a large 35"W section.
